- Production Print Solutions
- Wide Format Systems
- Printer & Supply Management

### Managed Security

- 15-Layered Security Framework
- Managed Data Backup
- Managed Firewall
- Advanced Security Services
- End Point Protection
- Print Security

# The Novatech Office X-Ray

We've designed an assessment to detect the internal problems affecting your business technology

## Things the Office X-Ray addresses/inspects for the customer:

- An account of all discoverable IT assets and users
- An overall view of the printing/copying environment
- IT issues that affect productivity
- Potential areas of weakness and risk
- A deeper knowledge of your IT infrastructure
- An understanding of the health of your IT infrastructure
- A comprehensive network & security assessment

## How it works

- An IT assessment tool collects system/inventory information (does not collect company or user data)
- A print scan tool collects model information, odometer readings, and print quantity trends
- While these tools are running, a Solutions Architect will discuss your needs, pain points, and desired end goals
- A physical inspection and review of the server room, network hardware, and printer/copiers will be performed

**Our services empower businesses to increase productivity, lower costs, minimize risks and drive growth.**

If your solutions partner is not delivering these outcomes for your firm, it isn't doing its job. With Novatech, you work with a dedicated partner that puts measurable business results at the forefront of every effort.
